

Air2-KF100 -PEBBLE, -ERGO

REMOTE-CONTROL KEYFOBS

Thanks to the two-way signal exchange between the transceiver and the Inim remote-control keys, all models of Air2 keys are capable of notifying the user, by means of visual and audible feedback signals (beep and LED signals) of the successful outcome of requested operations.

The keyfob has 4 buttons which can be programmed from the control panel.

The remote-control keyfob will allow the user to arm and disarm the anti-intrusion system, open a gate or switch on lights.

The device provides audible and/or visual confirmation of the successful outcome of the required command.

These remote-control keyfobs are also equipped with a useful 'lock keyfob' feature which protects the device against the execution of commands caused by accidental pressure on the buttons.

Main features	KF100/10	Pebble	Ergo
Communication with wireless devices	Two-way		
Operating frequency	868 MHz		
Programmable supervision time of wireless devices	from 12 to 250 minutes
