

Modular venturi tube

The TV06N-EXTEND is a new, 1 meter long extension tube, developed to both simplify the handling and reduce the costs related to transportation, stock-keeping and installation. The tube is fully compatible with other venturi tubes from the TV series and therefore it fits to the EBDDHN.

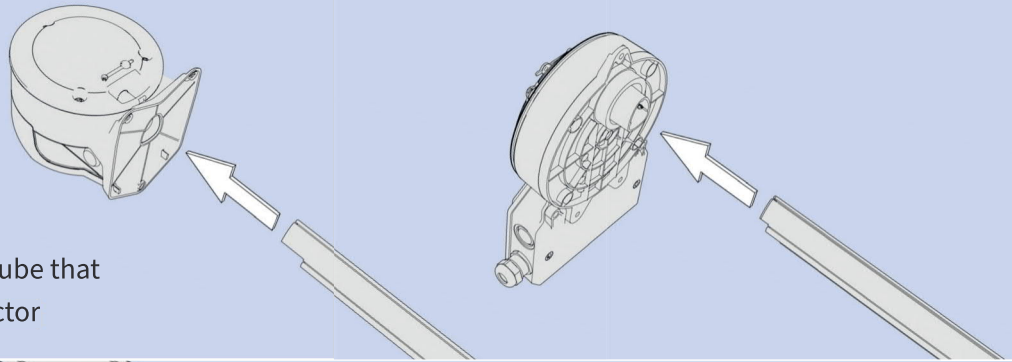

Multiple TV06N-EXTEND modules can be assembled together. The modular design eliminates the need for bulky and costly transports and the tubes are easily transported in a service van.

Please turn the page for a short explanation of how the tube is mounted.

Mount TV06N-EXTEND in 4 simple steps:

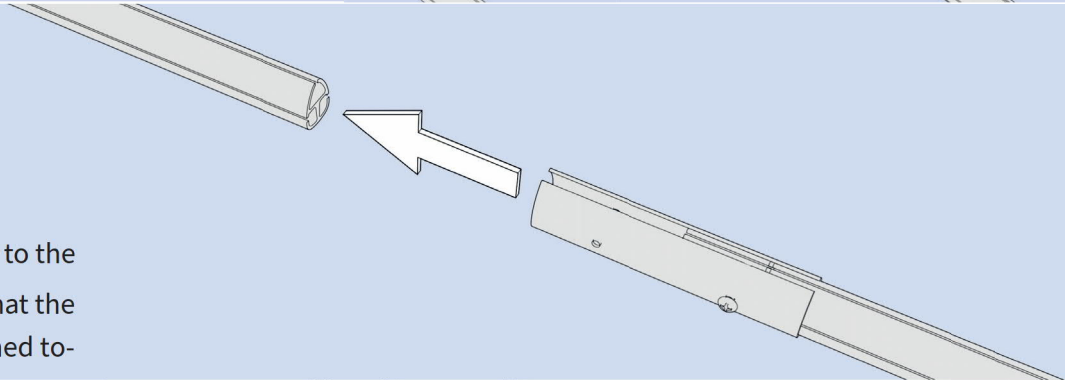

1

Mount the regular venturi tube that belongs to the smoke detector

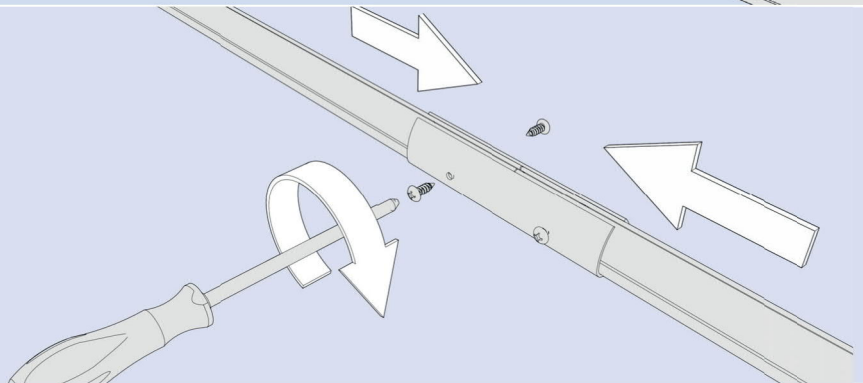

2

Mount the TV06N-EXTEND to the regular tube and ensure that the tubes are completely pushed together.

3

Secure the tube by using the two supplied screws.

4

If necessary, cut the TV06N-EXTEND to required length. Insert the end-plug and put on the plastic end gasket.
