WARNINGS

All units are recommended for indoor use. Unit must be tested periodically to verify the life of battery. STI recommends you change the 9 Volt battery twice a year. When purchasing a siren/strobe alarm, you will need to periodically test the connections to make sure audibles function at a sound level to alert staff. Installer may need to purchase a simple audio-meter, typically available at your local electronics store, to measure the sound in areas where the alarm is expected to be heard during normal noise environment. Results from this test may prove it beneficial to purchase additional siren/strobe alarm units.

All specifications and information shown are current as of publication and subject to change without notice.

CLEANING

- 1. Rinse cover with water to remove abrasive dust and dirt.
- 2. Wash with soap or mild detergent using a soft cloth. (DO NOT SCRUB.)
- 3. Rinse once more, then dry with a soft cloth or chamois.
- 4. To remove grease or wet paint, rub gently with a cloth wetted thoroughly with naphtha, then wash and rinse. (DO NOT USE RAZOR BLADES.)

INSTALLATION OF CABINET

Note: Installation of cabinet should be before installation of alarm because the mounting bracket butts up to cabinet.

1. Insert the (4) 06298 mounting tabs fully into backbox mounting tab slots. Use rubber mallet if necessary.
2. After selecting a suitable location, place cabinet in closed position, against the wall. Mark and drill (4) 1/4 in. diameter holes. Insert the (4) 19033 anchors. Mount cabinet by driving in the four #10 x 1 1/2 in. screws.
3. For STI-7531AED select one of the two shelf mounting locations, install shelf. Close and lock cabinet.

INSTALLATION OF ALARM

STEP 1 - MOUNTING OPTIONS

TO KEY MOUNT PLATE OR INTO WALL WITHOUT ELECTRICAL BOX

STEP 2 - ELECTRONIC SETUP -
SELECT ALARM TONE AND TIMING SEQUENCE

NOTE: Select-Alert must be on a flat surface and lens must be installed or the tamper switch will trigger the alarm.

STEP 3 - ALARM TONES - S1

STEP 5 - ELECTRONICS ASSEMBLY

Wiring: After mounting circuit board assembly, connect wires. Refer to terminal strip connections (step 6).

Lens installation: Slide lip behind circuit board mounting plate. Rotate lens into position. Secure with tamperproof screw and special wrench. ⚠ Unit will not operate properly if lens cover is not installed.

STEP 6 - TERMINAL STRIP CONNECTIONS

NOTE: "DC IN" are the only polarity sensitive terminals. When external power is used, battery will act as a backup. "Dry Contacts: NC, COM, NO" are used for remote alarm monitoring.
