# SpeakerPhone Jeweller

Wireless voice module for alarm verification

## Real-time voice communication for enhanced security

SpeakerPhone Jeweller is a wireless voice module for clear and secure two-way voice communication between users and a security company. The device lets the central monitoring station (CMS) contact the site immediately after an alarm to analyze the situation and rapidly respond to an emergency. The easy-to-install solution is a perfect choice for both residential and commercial settings.

Alarm verification

Help request

Deterring intruders

## Rapid response to a verified alarm

### Situation

The Ajax system detects a threat (e.g., motion detection, smoke, or panic button alarm).

### Verification

The Ajax hub immediately triggers SpeakerPhone Jeweller to establish direct voice contact with the security company's CMS.

### Action

Knowing the kind of threat, the security company can respond accordingly (e.g., dispatch security patrol or contact emergency services).

## AI-powered sound optimization

- Clear voice transmission
- Suppression of extraneous noise
- Improved audibility even at long distances
- Option to set up the AI feature in an Ajax app
